Summary

Backend Engineer with **3.5+ years** of experience building scalable microservices, distributed systems, cloud-native applications, and AI-integrated platforms using Golang. Experienced in AWS, Kubernetes, event-driven architectures, observability, CI/CD, and modern software engineering practices across large-scale production environments. Passionate about building reliable backend systems, platform infrastructure, and AI-enabled products.

Technical Skills

Languages: Go (primary), Python, Java, C/C++, TypeScript, Kotlin

AI/LLM: LangChain, RAG, Vector Databases, LLM Integrations, AI Agents

AWS Services: ECS, Lambda, RDS, DynamoDB, S3, SQS, SNS, EventBridge, CloudWatch, API Gateway

Infra & CI/CD: Terraform, Docker, AWS CodeBuild, CodePipeline, Jenkins, Kafka, Git, Kubernetes, Helm, GitHub Actions

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, DocumentDB

Observability & Testing: Structured logging (zap), Terraform, Prometheus, Grafana, OpenTelemetry

Frameworks: Gin, Spring Boot, Flask, Node.js, React.js

Soft Skills: Technical Leadership, Mentorship, Cross-team Collaboration, Agile Planning, Problem-Solving

Professional Experience

Software Development Engineer, Volkswagen Group Digital Solutions India, Pune

Sep 2024 – Present

- Engineered **Go microservices** (with Kotlin & Spring Boot) for a global production logistics platform handling **50K+ daily orders** across **30+ manufacturing plants** in India and Europe — directly analogous to high-throughput financial transaction processing.
- Architected AWS cloud infrastructure leveraging **ECS, Lambda, RDS, DynamoDB, SQS, SNS, and EventBridge** for event-driven async communication between services. Designed auto-scaling policies that reduced infrastructure costs by **25%** while maintaining **99% availability**.
- Led migration of a legacy **COBOL/DB2** mainframe system to a modern **Go microservices architecture on AWS**, resolving **distributed transaction** challenges and **race conditions** in concurrent, high-throughput workflows.
- Built production **CI/CD pipelines** using AWS CodeBuild & CodePipeline; implemented **structured logging with zap** at request boundaries and designed **CloudWatch dashboards & metric filters** for real-time observability and alerting.
- Implemented **mutual TLS (mTLS)** for secure inter-service communication; developed a **supervised ML model** to predict production timelines, improving scheduling accuracy by **30%** across Volkswagen and Porsche divisions.
- Championed **code reviews** and clean code practices; mentored junior engineers on reliability, security, and non-functional requirements; contributed to quarterly planning and technical roadmap discussions.

Full-stack Developer, Medtechsecure, Pune

Oct 2023 – Oct 2024

- Developed Golang REST APIs and backend services supporting healthcare workflow automation.
- Designed PostgreSQL schemas and optimized database queries for performance and scalability.
- Built React-based frontend modules integrated with Go microservices.
- Implemented authentication, role-based access control, automated testing, and CI/CD pipelines.

Full-Stack Developer, Voorent, Remote

Jan 2023 – Sep 2023

- Built CI/CD pipelines and containerized services using Docker and Kubernetes.
- Collaborated in Agile teams and owned features from design through deployment and monitoring..

Projects

Finpredict – Stock Market Prediction

- Engineered LSTM and RNN models trained on 13 years of market data achieving 85
- Experimented with LangChain, RAG, vector embeddings, and LLM-powered applications.
- Tech: Python, PyTorch, Deep Learning, LangChain, RAG

Education

Bachelor of Engineering in Computer Science

Aug 2020 – Jun 2024

Chandigarh University, Punjab CGPA: 7.87/10.0

- Relevant Courses: Data Structures, Algorithms, Database Management Systems, Object-Oriented Programming, OS
